Information about Course	Course aims to provide students with a comprehensive introduction to developmental psychology and to the scientific study of development. It is intended that this course may serve as a foundation for future courses in Developmental Psychology. Thus, a broad range of topics will be covered and no one topic will be covered in depth. We will cover the major domains of development -biological, cognitive, social, and emotional development - from the adolescence period chronologically, covering each age of the child in turn. Emphasis will be on discovering the many different biological and experiential factors that influence behavior and its development.

Information about Course	The overarching goal of this class is to provide students with a working knowledge of social psychology and to stimulate an interest in ourselves, the world around us, and the connections between the two. This is a course about how we become who we are - how our personalities (or our selves) are shaped by others, the groups we belong to, the social structures around us, and our interactions as social beings. However, interaction is a process between entities, a two-way street. Hence, it is not only about how the world around us shapes who we are, but also a course about how we shape the groups that we belong to and the social structures around us.
